

Client success story

Access and education provide the key for improved health among state's employees

The State of Vermont is committed to ensuring quality healthcare access for all its employees, including those living in rural communities, and the retiree population. As a government entity, the State of Vermont needed to find a virtual care partner who could offer a personalized experience that met the specific needs of its population while also adhering to privacy regulations.

Industry: State government

Virtual care offering:

Diabetes Management and
Hypertension Management

“

Sonia, my coach, was helpful, personable and focused on the issues I wanted to discuss. She has helped me focus on my goals, act as a sounding board and quickly access resources to answer all my questions.”

Addressing physical and educational barriers to care

The State of Vermont was feeling the burden of rising healthcare and insurance costs. It knew that addressing chronic conditions among its members could help lower the risk for life-threatening health conditions and ultimately prevent unnecessary medical expenses. But with many of its members living in rural areas with little physical access to healthcare or retirees who found it challenging to manage the healthcare system, the state needed a solution that could literally meet people where they were.

Approach

The State of Vermont made access and education a priority in the implementation of the programs, allowing all members, employed and retired alike, to make lasting change.

**Customized

reduced overall
population risk

“

The ability to provide individualized attention to every member with these programs was a game-changer. Now I know that everyone who needs it has the right support, be it a coach or monitoring device or activity tracker. And we get peace of mind knowing that our member data is safe with Teladoc Health.”

Clark Collins, Deputy Director of Benefits and Wellness, State of Vermont

Program highlight: Building trust to improve care connections

The State of Vermont found its retired population felt isolated or disconnected from healthcare providers, which made it harder to manage chronic conditions. Without effective management, chronic conditions can lead to serious health issues. By introducing the Diabetes Management and Hypertension Management programs and working with Teladoc Health to provide personalized education and training on the solutions, the state was able to give members more access to resources and the right level of support they needed to take full advantage of the programs.

“

I am able to keep my numbers and associated health concerns in better focus. I am more conscious of my choices as I am more accountable with [Teladoc Health].” **State of Vermont employee**
